The ThermoSafe® Basement

The warm and bright living space patented by Glatthaar

Glatthaar ThermoSafe® Basement

Cross-section of Glatthaar ThermoSafe® Basement

The unique quality engineered system with very high insulation values.
A valuable investment – additional living space, energy saving and eco-friendly.

Gone are the days when lower ground floor living meant a dark, damp cellar with no headroom. Glatthaar introduces their **ThermoSafe®** concept providing warm, bright and spacious living comfort. An extra bedroom, bathroom, kids playroom, gym, home cinema – the choice is yours.

The insulation values of our **ThermoSafe®** far exceed the Building Regulations. Our systems contains insulation within the outer basement walls up to the ground floor level. Therefore no coldbridging can occur. The insulation is protected within the external wall.

Consequently it is protected against ground pressure and water. As a result of our **AquaSafe®** Tanking System no moisture penetration through the outer wall can occur. The result is the perfectly dry **ThermoSafe®** Basement.
